

Telia Sovereign AI Cloud

We would like to inform you about our service, **Telia Sovereign AI Cloud** – a domestic, secure, and highly cost-efficient **AI GPU cloud service** operated from Telia Helsinki Data Center (HDC).

The service is designed to deliver concrete value quickly, without heavy upfront investments or complex deployments.

If your organization employs, for example, ML Engineers, AI Architects, or other data and AI specialists, this service and the related information may be particularly valuable to them.

Why should you adopt Telia Sovereign AI Cloud?

- Clear cost savings compared to traditional GPU solutions and hyperscale clouds
- Rapid deployment – AI computing environments available within minutes, without heavy projects
- Flexible scalability – capacity is used only when needed
- A domestic and secure solution where your data remains within HDC
- A predictable service model without major upfront investments

A special advantage for you as a Telia Colocation customer:

- The service is delivered from the same location as your IT equipment
- Easy integration as part of your existing environment
- Minimal need for changes to the overall architecture
- A single contractual partner and a clear division of responsibilities

The service is based on the [Verda](#) AI platform. Telia acts as a reseller and is responsible for the overall service offered for Telia customers.

If you would like to evaluate the benefits of the service in your own environment or discuss potential use cases, our HDC sales team will be happy to assist you.

You can contact us at hdc-sales@teliacompany.com.
